#### STATEMENT BY FOREIGN MINISTER

#### . KIICHI AICHI

## ON THE JOINT COMMUNIQUE

November 21, 1969

#### 1. (General)

The Joint Communique before us contains the substance of the exchange of views between Prime Minister Sato and President Nixon on matters of mutual interest to Japan and the Particularly noteworthy is that a basic agree-United States. ment was reached between the two leaders on the reversion of Okinawa in a peaceful manner, an event which has few precedences in world history. I should like to draw your attention further to the fact that, as the Prime Minister stated, the agreement on the reversion was reached in a form which carries all of the three principles our Government insisted upon during our negotiations, namely the principles of "reversion during 1972, removal of nuclear weapons, and the same status as mainland Japan." This accomplishment, which has an epock-making significance . in the diplomatic history of Japan, was made possible only with the strong support given by the people of Okinawa and the entire nation as well as by the relationship of friendship and mutual trust between Japan and the United States.

During the negotiations, the United States has shown a strong interest particularly in the maintenance of the deterrence capabilities of the bases on Okinawa. You are all well aware that it was only at the meeting between the two leaders here in Washington that the question of nuclear weapons was finally resolved.

Those who were engaged in the negotiations have pursued sincere and patient efforts to resolve one question after another on the basis of mutual interest of the two countries as well as their respective national interest. It is as a consequence of such efforts that, despite the difficult issues pending between the two countries in the trade and economic fields, the two countries were able to reach a mutually satisfactory settlement on a territorial question that is of vital importance to the very basis of national existence.

Such is the general background of the present Joint
Communique which records the views and policies of Japan and the
United States in the name of their Prime Minister and President.

The contents of the Joint Communique are explained below in
detail, but its major part can be summarized as specific elaboration of the three basic principles I referred to above.

The Joint Communique does not of course constitute an international agreement legally binding on the two countries.

In order to finalize the agreement reached here in a legal form, specific arrangements on the reversion of Okinawa should be negotiated between the two countries and submitted to the approval of the Diet. The Joint Communique, however, has the strongest political and moral force as an expression of the meeting of minds between the two leaders. What is contained in it cannot be changed easily by either of the parties in a unilateral manner.

The Communique is of great value to both Japan and the United States, as it now enables Japan to realize the earnest desire of the entire nation whereas it frees the United States from its unnatural involvement in the status of Okinawa. A firm foundation of the relationship between the two countries in the 1970's is now laid. I cannot over-emphasize the significance of the Joint Communique which is of common merit to both Japan and the United States.

2. (Peace and Prosperity in Asia and the World ~ Paragraphs l and 2)

These two paragraphs set the keynote of the Joint Communique as a whole. The Prime Minister and the President conducted an exchange of views on a lofty plain and on a long-term perspective looking well into the 1970's, as befitting the leaders of the two countries which would rank first and second in the free world in terms of their economic capabilities. They made it clear that, on the basis of close relationship between the two countries, Japan and the United States would cooperate with each other in the search for peace and prosperity through their contributions, particularly to the relaxation of international tensions as well as the economic development and stability of Asia and the world.

3. (Exchange of Views on the Situation in the Far East -Paragraph 2)

This paragraph expresses the views of the two leaders on the realities in the Far East where the actual fact is that what the Japan - U.S. Security Treaty defines as peace and security in the Far East, in other words the prevention of war in that area, relies on the existence of United States forces in that area as an effective deterrent.

The Prime Minister supported the basic position of the United States concerning the security in the Far East as stressed by the President, and recognized positively the value of the existence of United States forces in the Far East as a deterrent. He further expressed the view that, in terms of the general need to maintain an effective deterrent, it is desirable that the United States would be in a position to implement at any time its determination to honor fully the obligationsiit assumes under the existing defense treaties.

Needless to say, these views of the Prime Minister are confined to the general appraisal of the existence of United States forces in the Far East, and are not related to the specific manner of their deployment or extent of their equipment. They are also not related in any direct sense to the question of the

operation of the system of prior consultations or that of the status of bases on Okinawa after reversion, both of which are dealt with in other parts of the Communique.

4. (Examination of the Situations in Different Areas Paragraph 4)

This paragraph, in further elaboration of the previous paragraph, expresses the views of the two leaders on the situations in Korea, Taiwan and the Indo-China peninsula where military tension or conflict actually exists.

The statements of the Prime Minister on Korea and Taiwan are reflections of how, under the present situation in the Far East, he views in a general sense the security of Korea and Taiwan in relation to Japan's own security. As the Prime Minister himself stated at the press conference, if an armed attack were to occur against the Republic of Korea, it would certainly affect the security of Japan seriously. Therefore, should an occasion arise for prior consultation, it would certainly serve Japan's own national interest for the Government to decide its position on the basis of the foregoing regognition. I am glad to say that an armed attack in the Taiwan area cannot be foreseen today. But, we will need to recognize fully the fact that it is another important factor affecting the security of Japan. I should of course like to draw your attention to the facts that the relaxation of international tensions is a major objective for both Japan and the United States, and that the Joint Communique itself records the agreement of the two leaders in their hope

that Communist China would adopt a more cooperative and constructive attitude in its external relations.

I should particularly like to emphasize in this regard that the position of the Government in any prior consultation would be determined solely on the basis of its judgement on our national interests, namely the needs for the attainment of the security of Japan. The decision is not something which would be made automatically because of the obligations assumed by the United States in its defense treaties with other countries. The expressions used in the Joint Communique are based on none other than such a position of the Government.

As regards the problem of Vietnam which the two leaders took up as one of the greatest problems in Asia today, the two leaders expressed their strong hope that the war in Vietnam would be concluded before the reversion of Okinawa, and the Prime Minister referred to the exploration of the role Japan could play in bringing about stability and reconstruction in Indo-China.

In view of the serious efforts being made by the United States to bring about peace, the Japanese Government is of the view that it would hardly be possible for peace in this area not to be brought about by the time of reversion, if the North Vietnamese side responds to the efforts of the United States in earnest. We do understand, however, that the United States,

being currently engaged in negotiations for peace, is not in a position to commit itself unilaterally on a specific date for the termination of the war. The United States would not be in a position to exclude completely the possibility that peace would not be realized by that time. This part of the paragraph, therefore, is meant to say that, in case such a situation should arise, the two Governments would consult with each other and decide what specific policy alternatives are possible taking fully into consideration the various factors prevailing at that time.

Japan has supported the basic policy of the United States to bring about a just peace so as to assure the South Vietnamese people the right of self-determination. It is not possible at present to ascertain how such efforts on the part of the United States would be affected by the reversion of Okinawa or to determine what policy alternatives exist in case where such efforts are affected by reversion. The provision in this paragraph calls for consultation for any future eventuality. It is evident that the "consultations" envisaged here are not of course "prior consultations" on the basis of the Security Treaty.

I should like to add, just as a reminder, that throughout the foregoing exchange of views on different areas, the Japanese side has never made in any sense a so-called "prior commitment to give an affirmative reply in the event of prior consultation." 5. (Affirmation of the Intention to Firmly Maintain the Security Treaty - Paragraph 5)

The two leaders affirmed in this paragraph their intension firmly to maintain the Security Treaty which is now making a significant contribution to the maintenance of peace and security in the Far East including Japan. It goes without saying that such mutual affirmation does not imply a legal agreement to fix the term of effectiveness of the Treaty by restricting the respective right of the two countries to terminate the Treaty.

There was also an agreement to continue to maintain as in the past chose contact with each other for deepening mutual understanding through normal diplomatic channels or other appropriate forums such as the Security Consultative Committee.

This is to continue to ensure the security of Japan under the international situation which is in a state of flux.

## 6. (Timing of the Reversion of Okinawa - Paragraph 6)

This paragraph contains one of the most important elements of the Joint Communique. It expresses the agreement reached between the two leaders to accomplish, as the policy of the two Governments, the reversion of Okinawa during 1972 and to enter immediately into negotiation regarding specific arrangements for that purpose, namely an agreement on the return of the administrative right over Okinawa to Japan.

The paragraph also expresses the fact that such an agreement requires the approval of the Diet. Although the expression "with the necessary legislative support" is used because no decision has been reached on the United States side as to whether the agreement requires the consent of the Senate, there is no question that the approval of the Diet is required in the case of Japan.

At any rate, as the President with whom the highest responsibility of the United States Government rests clearly indicated a specific timing of the reversion at the talks with the Prime Minister himself, it could not be changed due to any particular circumstance on the part of the United States.

As the Prime Minister stated, the reversion during the year of 1972 is in effect the same as "immediate reversion", because a period of this length for preparation is required considering the need to absorb the "reversion shock" and to give

reassurance to the people of Okinawa on smooth transfer of the administrative rights over Okinawa to Japan.

Although you must have noticed it, I should like to remind you that the wording used in this paragraph is exactly the same as the part on the agreement on the reversion of the Bonin Islands found in the Joint Communique of 1967 between Prime Minister Sato and President Johnson.

It is a matter of course that, following reversion, the local defense of Okinawa, which will then become again a part of Japan, will become our responsibility. The Government intends to assume such responsibility gradually at our optimum pace.

It is quite important for the security of Japan that the bases of the United States forces on Okinawa, which are now playing an important role under the present situation in the Far East, will continue to discharge their functions effectively even after reversion. Accordingly, the use of all these bases after reversion will be permitted in the same manner as with the mainland as facilities and areas under the Security Treaty by agreement between Japan and the United States in accordance with the Status of Forces Agreement. It is self-evident, therefore, that the existing United States bases would not continue to be maintained as vested rights.

# 7. (Status of the Bases on Okinawa after Reversion - Paragraph 7)

This is another paragraph of a cental importance where the two leaders reached agreement on the reversion of Okinawa with "exactly the same status as mainland Japan". It clearly shows that the United States has accepted the basic position of Japan to apply to Okinawa the present Security Treaty and its related arrangements without modification and without any other special agreement. It follows that the prior consultation system will be fully applied to Okinawa after reversion, and consequently the so-called "free use of the bases" or "free combat operations from Okinawa" will not take place. As I will explain later, Okinawa will be also free of notion weapons.

The "related arrangements" referred to above are the following agreements approved by the Diet together with the Security Treaty; the Exchange of Notes concerning the implementation of Article 6 of the Treaty, which is an agreement on prior consultation; the Exchange of Notes concerning Yoshida-Acheson Exchange of Notes, etc.; the Exchange of Notes concerning the Mutual Defence Assistance Agreement; and the Status of Forces Agreement.

Ω

The Prime Minister then affirmed the recognition of his government that the security of countries in the Far East was a matter of serious concern for Japan. In the light of such

recognition, the return of the administrative rights over Okinawa in the manner set forth above will not hinder the effective discharge of the international obligations assumed by the United States for the defense of countries in the Far East. The Prime Minister and the President shared this basic viewpoint.

Needless to say, this does not imply a prior commitment or assurance of affirmative responses at prior consultations on specific individual situations, as is fully understood by the United States side.

As a consequence of the application of the Status of Forces Agreement, the United States forces in Okinawa will come to have exactly the same status as those in mainland Japan. The problems related to the bases in Okinawa including the so-called "human rights problems" will come to be dealt with on the same basis with mainland Japan, fully protecting the rights of the people of Okinawa. The problem of rearrangement and convergence of the bases will also be handled in the same orderly manner as in mainland Japan in accordance with the provisions of the Status of Forces Agreement.

It must be crystal clear from the foregoing that Okinawa will come to have the same status as mainland Japan after reversion and there will be no discrimination between them.

### 8. (Nuclear Problem - paragraph 8)

This too is one of the core paragraphs of the Joint Communique.

The Prime Minister has set forth therein the policy of our government based on the "three non-nuclear principles" and the President has assured the Prime Minister of the intention of the United States Government to ensure the reversion of Okinawa to be carried out in a manner consistent with such policy of the Japanese Government. As a result, it has been made clear that Okinawa will be returned without nuclear weapons. In effect, since it is an assurance given by the President with whom the highest responsibility of the U.S. Government rests, there could be no clearer guarantee with respect to the removal of nuclear weapons from Okinawa at the time of reversion. It would not be necessary for me to explain to you, therefore, that it would be inconceivable that the so-called "under-cover" nuclear weapons could be covertly retained on Okinawa after its reversion.

Furthermore, under the prior consultation system the introduction of nuclear weapons into Japan (mainland and Okinawa after reversion) is not prohibited in a legal sense

but that the current policy of the Japanese Government based on the three non-nuclear principles is to refuse the introduction of nuclear weapons. It is essentially a matter that would be subject to the prior consultation procedure and the expression "without prejudice to its position with respect to the prior consultation system" constitutes affirmation of its position by the United States Government. Consequently, Threed hardly add that by that expression Japan has not given the assurance that it would permit the "introduction of nuclear weapons in times of emergency".

## 9. (Financial and Economic Problems - Paragraph 9)

This paragraph relates to such matters as transfer of local United States assets to Japan, conversion of currency and activities of local United States business interests following the reversion of Okinawa. While the paragraph does not go into details on this matter, it states that specific discussions between Japan and the United States will be initiated as part of the consultations regarding specific arrangements for the reversion of Okinawa.

For my part I consider that it would be necessary to give equitable treatment to U.S. business interests currently engaged inllegitimate activities in Okinawa at the time of reversion.

2

### 10. (Preparations for Revision - Paragraph 10)

In connection with reversion of Okinawa, which has been placed over a quarter century after the war under various systems different from that of the Japanese mainland in all sorts of fields such as the legal, political, economic and social, it is most important that unnecessary friction and confusion in the livelihood of the inhabitants of Okinawa should be prevented. For this purpose, our government has already taken numerous measures through the policy of "Ittaika" including the elimination of differences between Okinawa and the mainland. As the time for reversion approaches, it goes without saying that even more careful and adequate preparations should be made to ensure that the welfare of the inhabitants of Okinawa will be further promoted. On the other hand, until the date of the reversion, the United States will continue to assume responsibility for the administration over Okinawa. Accordingly, both leaders have agreed relative to the preparations for reversion that Japan and the United States should consult and cooperate closely. They further agreed that the United States - Japan Consultative Committee in Tokyo should undertake overall responsibility for this preparatory work and that a Preparatory Commission will be newly established in Okinawa. This Commission, unlike the existing Japan - U.S. - Ryukyu Advisory Committee, will be

composed of the highest ranking representatives of both the Governments of Japan and the United States, who, in our case, will be a representative of ambassadorial rank and in the case of United States the High Commissioner of the Ryukyu Islands. These representatives will consult and coordinate locally on measures relating to such preparation on a completely equal footing. Moreover, in order to reflect the will of the inhabitants of Okinawa, the way has been left open for the Chief Executive of the Government of Ryukyu Islands to participate as adviser to the Commission. In order to establish this Commission as soon as possible and to enable it to begin its work, the Government intends to take the necessary domestic as well as diplomatic procedures, including specific matters such as its terms of reference. The preparatory work will cover a wide range of measures including the re-establishment of Okinawa Prefecture, improvement incemtral and local administration, the application of the Status of Forces Agreement which will permit the solution of problems related to bases and human rights, and the alignment of the legal, economic, financial and other systems with those applicable on the mainland. Our Government intends during this preparatory period, to maintain close communication with the United States as the administering power and to cause its local representatives to cooperate with the Government of the Ryukyu Islands and

other representatives of the inhabitants of Okinawa in creating the basis for the building of an "affluent Okinawa Prefecture" as mentioned by the Prime Minister. With respect to the question of the participation of the people of Okinawa in the Dict, agreement in principle was already reached between Japan and the United States last year. While there is no specific mention of it in the present joint communique, I need hardly add that in the important period before reversion, it should be realized at an earliest possible date. For my part, I trust that domestic procedures will be taken promptly to this end.

### 12. (Economic - Paragraph 12)

The views of the two leaders on the major issues between our Government and the United States, namely the question of liberalization of trade and the export of textiles to the United States are set forth in this paragraph. I would like to explain in some detail on this matter including its background.

- (1) Japan U.S. trade amounted to 7 billion dollars last year, which is the highest recorded figure for a bilateral trans-oceanic trade. The exchanges of capital and technology have also increased. The leaders noted the marked growth in the economic relations between the two countries and that such relations were becoming increasingly close.
- tions in the world economy as indicated by the fact that they are respectively the first and second ranking in their gross national product in the free world.

  In this connection, the two leaders acknowledged that the leading positions which their countries occupied in the world economy imposed responsibilities upon their respective countries for the maintenance and strengthening of the international trading and monetary system.

(As a great economic power, we must discharge our responsibility.)

- (3) The determination of the United States to bring inflation under control was reaffirmed. The fact that this point has been emphasized in connection with the strengthening of the international trading and monetary system, is noteworthy.
- (4) I welcome the fact that the posture of the United States to defend the principle of free trade has been reaffirmed. This means indeed that the great American market has been secured. Its significance, however, does not rest there. Inoother words, the fact that the United States, which has created a free and open international economic system in the postwar period and which has always been the motivating force in maintaining and strengthening the system, has made known its intention to continue to maintain a free trade policy, is a matter of far-reaching importance not only to the development of the world economy but also to the expansion of our own economy.
- (5) Our government has been promoting the liberalization of trade and capital transactions. Its intention to continue its efforts along these lines from the view-point of assuming its responsibility as a member of the

international community was given expression. With respect to the reduction of trade restrictions, the decision taken by the Cabinet Ministers concerned last October was reaffirmed.

between Japan and the United States since the visit to
Japan of Mr. Stans, the Secretary of Commerce, in May
of this year. Hope was expressed that the preliminary
discussions between Japan and the United States which
are now being conducted at Geneve, would contribute to
the furtherance of understanding between our two countries and that it would lead to a solution of difficulties
in economic relationship between the two countries.

# 13. (Aid - Paragraph 13)

In this paragraph the two leaders agreed that economic development in the developing countries should be promoted through the joint efforts of the developed as well as the developing countries, and that the solution of the so-called North-South problem was essential to the development of international peace and stability. It was further agreed that both Japan and the United States would deal with the question of developmental aid on the basis of such common recognition.

Our Government has repeatedly stated its intention to expand and improve its aid programs in Asia commensurate with the economic growth of our country. In this paragraph, the Prime Minister reiterated to the President such an intention on the part of our Government.

The President, for his part, confirmed that the United States Government would continue to make active contribution to the economic development of Asia. Thus our two countries will continue to assist in the economic development in Asia to the best of their abilities.

### 14. (Space Cooperation - Paragraph 14)

The Prime Minister congratulated the President on the successful moon landing of Apollo 12, and expressed his hope for its safe return back to earth. He agreed with the President on the common recognition that with respect to the exploration of space for peaceful purposes, which is not only a new field in science but is fast becoming an important new field of international cooperation, the promotion of international cooperation could be identified with the promotion of world peace.

While the Agreement on Space Cooperation between Japan and the United States, aims primarily at facilitating the implementation of our space exploration program, it is of significance in that it further promotes the friendly relations between Japan and the United States through our mutual cooperation in such a positive field.

### 15. (Disarmament - Paragraph 15)

Arms control means to apply certain controls in arms policies, including the quality, quantity, development, deployment and use of arms. It also covers such matters as suspension of nuclear testing and the prohibition of the emplacement of nuclear weapons on the sea-bed, and the "curbing of arms race" is to achieve a mutual reduction of the speed of armaments. The Strategic Arms Limitation Talks between the United States and Soviet Union at Helsinki would come under this category. In this paragraph, the Prime Minister Stated that we would strongly hope for the success of these talks but that, however, we would not be satisfied merely with arms limitations and that we had a strong interest in realizing effective disarmament measures (for example, prohibition of chemical and bacteriological weapons, and the reduction of nuclear weapons) with a view to achieving general and complete disarmament.

### 16. (Conclusion)

In the present talks, the two leaders engaged in a frank exchange of views based on mutual friendship and trust, and after the fullest consultation succeeded in bringing forth results satisfactory to both sides.

As one who has been charged with the task of assisting the Prime Minister in these negotiations, I am convinced that the results that have been achieved at this time are the greatest and the best that could be expected under the current international situation.

The return of administrative rights over Okinawa has settled the last remaining problem left in the wake of war to our respective countries.

I would like to state, however, that the results of the present talks do not rest there. The solution of the Okinawa problem has brought forth a new relationship between Japan and the United States. Our two countries have established a solid foundation upon which we will cooperate and assume a positive role in the international scene.

As we face the 70's, our two countries have reached a point where we will not merely be dealing with bilateral problems between ourselves, but bring a positive contribution

Pacific region as well as the entire world. It is my belief that we in Japan must renew our resolve to plot the course of our nation upon a vision that would be worthy of this new era. The significance of the present joint communique should be evaluated highly as a historic document which marks the advent of a new era in Japan - U.S. relationship.
